ADDA-AES-8

Bi-directional audio transport

The Flashlink ADDA-AES-8 is an audio converter with both A/D and A/A converters located on a single module.

The module is well suited for high density modular audio conversion or stand-alone applications with the one slot N-BOX.

It may also be used as an auxiliary module to the AV-3G-XMUX on a dedicated connector panel. With the second generation FlashCase this option occupies only one module slot.

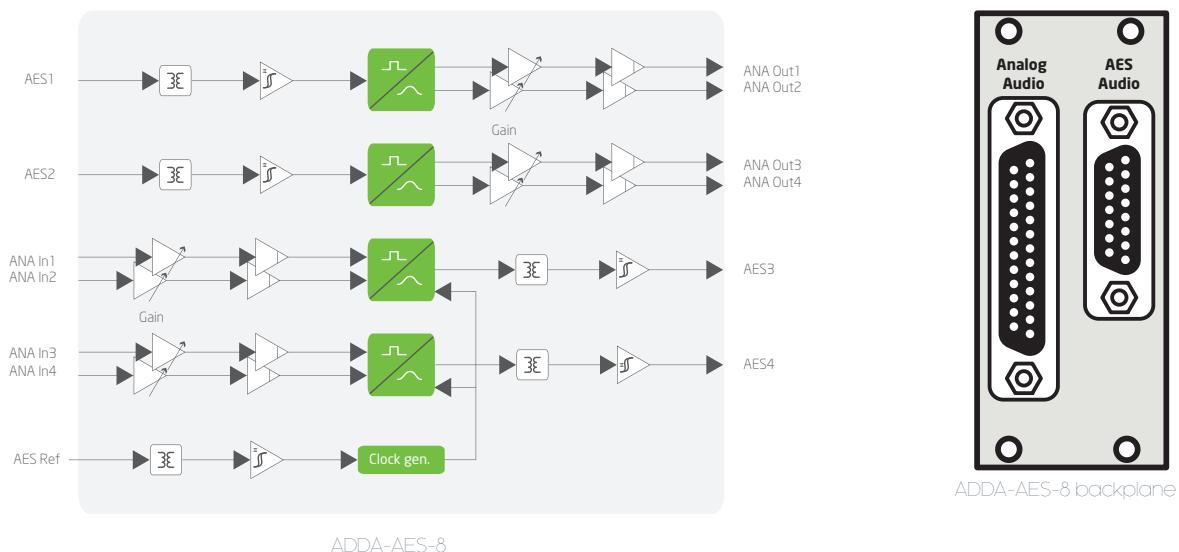

Also available in this family are the ADC-AES-8 and DAC-AES-8, which are dedicated quad stereo converters.
